

Belle Forêt Stone Vessel & Maintenance

Your Belle Forêt stone vessel is a natural stone that is hard and durable. Marble has an absorption factor that allows liquids that contact the surface to affect the color of the basin.

A proper maintenance of the vessel will help protect the beauty of the stone.

Please inspect your stone vessel carefully before installing, as Belle Forêt does not warrant the finish after installation.

Maintenance Instructions

- 1) After installation, carefully clean your Belle Forêt stone vessel with a marble cleaner/sealer such as Faucet & Fixture wax (by Flitz: www.flitz.com/faucetandfixturewax.htm).
- 2) Wipe dry immediately after each use. Do not allow water spots to dry on the vessel.
- 3) Applying a marble wax (see #1) can provide a temporary protective coating against daily use.
- 4) **NEVER** use cleansers with abrasives (including "Soft Scrub" type) nor harsh chemicals on your Belle Forêt stone vessel.

Important to remember: To help keep you basins beautiful, keep them cleaned and dry immediately after use.
