

PRECISION GUIDED 2 in. Brad Nailer

QUICK CLEAR LATCH

Sometimes jams happen. This new latch design lets you quickly and easily clear a jam.

ANTI-DRY FIRE

This tool will not fire when there are five nails or less in the magazine, preventing damage to your surface.

SWIVEL PLUG

This handy swivel plug lets you move the nailer easily as you work in tight spaces.

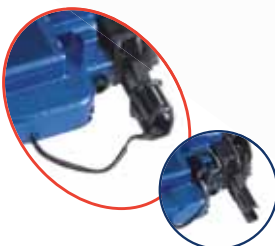

BUBBLE LEVEL

This convenient level shows if your tool is plumb. Make vertical shots with confidence and use it for horizontal applications (shelving).

TETHERED NO-MAR TIP

Now you don't have to worry about losing your no-mar tip. It connects easily to your nailer. The no-mar tip helps prevent damage to the wood surface, so be sure to use it!

3 POSITION SWITCH

Convenient feature allows you to easily switch from bump, sequential and safety mode. It's similar to changing from forward to reverse on a power tool.

REAR EXHAUST

The exhaust is vented down the handle, keeping it away from your face and the work surface.

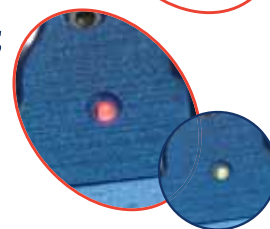

OIL-FREE

No maintenance

LOW NAIL INDICATOR

You will know when to reload nails before you run out. The "Reload Alert" shows a yellow light when you have 10 nails left, and a red light when you have only 5 nails remaining.

LASER PLACEMENT

This nailer includes a built-in laser, to help you get accurate nail placement. When you place the tip of the nailer on the surface, the laser will shine.
