

LAXseries

by: MASHstudios

Our Environmental Commitment

We at MASH Studios have been receiving many inquiries from our customers regarding how the LAXseries is “green.” We felt it very important to address these questions, because the environmental impact of our products is one of our main priorities. MASH Studios is committed to practicing environmentally conscious and sustainable actions, as are outlined by the following Green Statement.

The LAXseries was designed to be a modern classic, one that would outlive trendy aesthetics or cheap construction. Where many other comparable products may deteriorate or fall out of style over time, the LAXseries uses superior craftsmanship, the highest of quality materials, and clean simple lines to ensure longevity and sustainability. What started merely as a design initiative and dedication to quality has thus become the LAXseries’ most environmentally friendly feature- its ability to last decades and substantially minimize the resources that would be invested to frequently replace it.

The materials that go into every LAXseries piece are meticulously selected for their quality and positive environmental impact. Each piece of furniture is made of solid English Walnut, free of formaldehyde glue and other toxins. By using an engineered wood, the LAXseries is able to maximize the yield from each tree and virtually eliminate waste. All of the pieces are sealed with a natural oil finish. Made from linseed oil, the finish is VOC-free and solvent-free. The aluminum sliding doors, an integral part of the LAXseries design, are all made of 100% recyclable, powder-coated aluminum.

The environmental impact of the LAXseries is of utmost importance to MASH Studios, and accordingly, MASH is dedicated to continuous product development to ensure its products are as sustainable and environmentally sound as possible.
